

# Tracing Problem Set

## Table of contents

<b>1 Problem 1:</b>	<b>1</b>
1.1 Solution . . . . .	2
1.2 Explanation . . . . .	2
<b>2 Problem 2</b>	<b>2</b>
2.1 Solution . . . . .	2
2.2 Explanation . . . . .	2
<b>3 Problem 3</b>	<b>2</b>
3.1 Solution . . . . .	3
<b>4 Problem 4</b>	<b>3</b>
4.1 Solution . . . . .	3
<b>5 Problem 5</b>	<b>3</b>
5.1 Solution . . . . .	3
5.2 Explanation . . . . .	3

## 1 Problem 1:

What is the output of the following code?

```
1 x = 10
2 y = 5
3 while x > 5:
4     x = x - y
5 print(x)
```

## 1.1 Solution

5

## 1.2 Explanation

The loop runs once and reduces `x` to 5, ending the loop.

## 2 Problem 2

What is the output of the following code?

```
1 lst = [10, 20, 30, 40, 50]
2 for i in range(len(lst)):
3     if lst[i] % 20 == 0:
4         lst[i] = lst[i] + 1
5 print(lst)
```

### 2.1 Solution

[10, 21, 30, 41, 50]

### 2.2 Explanation

Only elements divisible by 20 are modified:

- 20 → 21
- 40 → 41

## 3 Problem 3

What is the output of the following code?

```
1 scores = {"Alice": 85, "Bob": 90, "Charlie": 75}
2 total = 0
3 for key in scores:
4     total += scores[key]
5 print(total)
```

### 3.1 Solution

250

## 4 Problem 4

What is the output of the following code?

```
1 grades = {"John": [80, 85], "Alice": [90, 95], "Bob": [70, 75]}
2 for student in grades:
3     grades[student].append(sum(grades[student]) / len(grades[student]))
4 print(grades)
```

### 4.1 Solution

```
{'John': [80, 85, 82.5], 'Alice': [90, 95, 92.5], 'Bob': [70, 75, 72.5]}
```

## 5 Problem 5

What is the output of the following code?

```
1 def mystery(n):
2     if n <= 0:
3         return 0
4     else:
5         return n + mystery(n - 2)
6
7 print(mystery(5))
```

### 5.1 Solution

9

### 5.2 Explanation

The recursion adds values 5, 3, and 1, resulting in 9.
